### **DETAILED ACTION**

This is a response to the Applicant's Response to non-final office action submitted on February 14, 2006. In virtue of this response, claim 6 remains active in the instant application (claims 1-5 and 7-12 were previously canceled).

#### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

*A person shall be entitled to a patent unless –  
(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.*

2. Claim 6 is rejected under 35 U.S.C. 102(b) as being anticipated by Liu et al. (U.S. Patent No. 5,371,440).

With respect to claim 6, Liu et al. discloses, in Fig. 2, an apparatus for driving a discharge lamp [19] and a corresponding method comprising (a) converting (via Q2, Q3) a DC signal (from output of rectifier [23]) into an AC signal, (b) filtering the AC signal (via C0) to the discharge lamp [Ld], (c) oscillating (via oscillator [15 in control circuit [20]; see col. 3, lines 27-32) the converted DC signal such that the AC signal has a frequency based on a resonant frequency of said lamp [19] (which is made of [L0, C0]), and (d) sensing (via current sensor [37]) a full wave current (see Fig. 2) flowing through said lamp [19] without the use of a sense capacitor connected to a terminal of said lamp [19].

#### ***Response to Applicant's Arguments***

3. Applicant's arguments with respect to claim 6 have been considered but are moot in view of the new ground(s) of rejection.
